Needle holders have jaws with carbide inserts and according to the use required the resp. structure can be chosen. A smooth jaw surface as well as 3 different serrations enable a sure "grip" of the resp. needle.

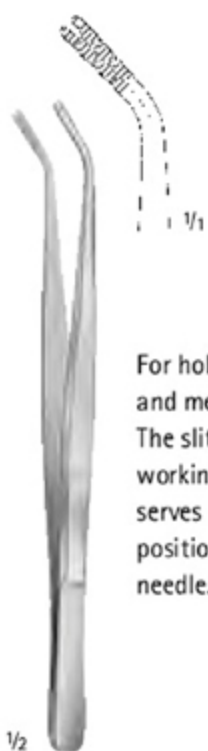

We recommend carbide inserts

with smooth jaw surface for suture material	9/0 – 11/0
with 0.2 mm pitch of serration for suture material	6/0 – 10/0
0.4 mm	4/0 – 6/0
0.5 mm	up to 3/0

Needle holders with carbide inserts
Identification:
gold-plated rings, handle ends and ratchets

For holding tissue and membranes. The slit in the working tip serves for precise positioning of the needle.
